

VADEMECUM FOR SUSTAINABLE SPECTATORS

1st RULE, RESPECT THE RULES!

Follow our advice and help make the events at the Enzo and Dino Ferrari International Circuit and everyday life more sustainable.

... DURING THE EVENT:

RECYCLE!

Do not throw rubbish on the ground. Inside the paddock, in the lawn area and in the other spaces of the circuit, you will find containers for separate waste collection.

RESPECT!

Remember not to park motorcycles and cars in the parking spaces reserved for people with disabilities and do not clutter their accesses.

BE SENSIBLE EVEN WHEN HAVING FUN

Continue to have sustainable behaviours even when you are having fun, not just at home. Do not waste food, water and energy in the structures that host you.

NO CIGARETTE ENDS ON THE GROUND!

Do not throw cigarette ends on the ground, once they have been extinguished you can throw them in the appropriate containers on the terraces and near the containers for separate waste collection.

MOVE IN A SUSTAINABLE WAY

To reach the circuit, please opt for public transport, bicycles, scooters and the various sharing systems which are excellent solutions for moving in a sustainable and intelligent way.

Use the car only if strictly necessary, or if it is a hybrid or electric car, and share the trip with your friends.

... AND ALL OTHER DAYS:

TURN OFF ELECTRONIC DEVICES

Avoid leaving them on standby. Disconnect phone chargers and transformers because they consume even when they are not connected to any device.

USE LED BULBS

They consume little and last a long time. Remember to clean lamps and bulbs at least once a year: you will have more light at no cost.

REDUCE FOOD WASTE

Favour the good preservation of food: in your refrigerator there is a right shelf for each food. When you shop, buy only what is actually needed.

COOK WITH LOW IMPACT

Put the lid on the pot when you cook, you can save up to a quarter of the energy needed for cooking.

WALK THE STAIRS!

Avoid using the elevator and prefer stairs, so in addition to saving energy, you also gain in health!

DO NOT WASTE WATER!

Avoid running the water unnecessarily, for example while soaping or brushing your teeth.

USE FULL LOAD APPLIANCES

Opt for washing at low temperatures (going from 90 ° C to 60 ° C saves up to 30% of electricity).

TRAVEL SUSTAINABLY!

Use the car only if strictly necessary and when so, opt for sharing the trip with friends or work colleagues. Bicycles, scooters, public transport and "sharing" mobility systems are excellent solutions for moving in a sustainable way. Electric and hybrid vehicles are advisable.

CORRECTLY ADJUST HEATING

Do not set the heating to high temperatures, keep it around 20 ° C. If it's too hot, don't open the windows but lower the temperature by adjusting the thermostat.

REDUCE DISPOSAL

Before disposing of an object, consider donating it to others or reselling it, so as to increase reuse practices. However, if it is actually to be thrown away, differentiate it correctly to be able to recycle everything that is recoverable.
